Professional Summary

Enthusiastic and motivated Computer Science graduate (B.Tech, 2024) deeply passionate about logical problem-solving, software development, and data analytics. Dynamic Software Developer with a background in MERN stack development, experience in manual software testing, with hands-on practice in writing test cases, executing manual testing cycles to identify bugs, and preparing defect reports. Certified in the Google Data Analytics Professional Certificate with foundational knowledge in SQL, Python, MS Excel, and Tableau. Combines strong software development lifecycle practices with analytical skills to support both software engineering and data-driven decision-making.

Technical Skills

Languages: JavaScript, Python(Basics), SQL(Basics), C, C++(Basics)
Web Technologies: HTML5, CSS3, ReactJS(Basics), MongoDB, NodeJS(Basics), ExpressJS
Specialized Tools: Git, GitHub, VS Code, Postman, Power BI(Basics), Tableau(Basics), Microsoft Excel, Microsoft Word
Frameworks: Tailwind CSS, Bootstrap, React Bootstrap

Experience

Full-stack Software Engineer June 2026 – Present
BitBridge Technologies

- Created comprehensive test cases and led integrated testing workflows to ensure software reliability.
- Developed user interfaces and integrated frontend components aligned with client specifications.
- Participated in Agile/TDD development processes to build, test, and deploy software features.
- Analyzed and onboarded onto a large-scale, pre-existing enterprise project, conducting deep codebase walkthroughs to understand existing architectural patterns and business logic.
- Authored comprehensive, end-to-end test suites and detailed functional test cases to ensure structural integrity across legacy and newly integrated features.
- Executed rigorous integrated testing cycles across multi-tier application layers, actively identifying software bugs, performance bottlenecks, and edge-case failures.
- Generated analytical integrated testing reports and defect logs, collaborating closely with senior developers to streamline bug resolution and elevate overall product quality.

MERN Stack Developer Sept 2024 – March 2025
Luminar Technolab (Training)

- Utilized the MERN stack to build scalable and efficient web solutions from concept to deployment.
- Managed the entire software development lifecycle, including deployment and maintenance.
- Trained in full-stack web development, building responsive web applications using ReactJS, NodeJS, ExpressJS, and MongoDB.
- Developed web pages and connected frontend components to database endpoints to handle basic CRUD operations.
- Learned core software concepts, version control using Git/GitHub, and full software development lifecycle (SDLC) practices.

Projects

Pothole Detection and Drowsiness Prevention System 2023 – 2024

Python, Inertial Measurement Units, Computer Vision, GPS

- Developed the front-end interface for a mobile safety application designed to display real-time driver alert notifications and hazard warnings.
- Integrated live video feeds using OpenCV to display visual alerts and audio prompts upon detecting driver fatigue and eye-blink patterns.
- Designed responsive UI components to display live GPS coordinates and log road hazard data captured by accelerometer and gyroscope sensors.
- Tested front-end responsiveness across different screen layouts and light conditions to ensure seamless driver interaction and safety usability.
- Tools Used: Computer Vision(cameras,image processing,Eye Blink Detection), Inertial Measurement Units (Accelerometer,gyroscope), GPS (Global Positioning System)

Interest Website 2024

HTML5, CSS3, Bootstrap, ReactJS, JavaScript

- Developed a responsive web application to calculate simple interest based on user inputs for principal, rate, and tenure.
- Implemented form input handling and state management using React hooks (`useState`) to update calculation results dynamically.
- Styled the user interface using React Bootstrap components to ensure a clean layout across different screen sizes.
- Tools Used: ReactJS, React Bootstrap, and standard web technologies.

Seat Booking System 2025

JavaScript, HTML5, CSS3, MongoDB, Express JS, React JS, Node JS

- Developed a full-stack MERN application enabling users to browse available movie showtimes and select seats interactively.
- Built responsive React.js frontend interfaces connected to Express.js backend APIs to update seat selection states in real time.
- Designed MongoDB database schemas to manage user bookings, theater seat maps, and movie availability status accurately.
- Integrated basic input validation and API endpoints to ensure booked seats are correctly locked and saved to the database.
- Tools Used: JavaScript, HTML5, CSS3, Bootstrap, Tailwing CSS, MongoDB, Express JS, React JS, Node JS

Certifications

Google Data Analytics Professional Certificate May 2026 – June 2026

Coursera

National Council of Technology and Training Certificate Sept 2024 – Feb 2025

MERN Full Stack Development

Education

Eranad Knowledge City Technical Campus Manjeri, Kerala

B.Tech in Computer Science and Engineering (CGPA: 8.46/10.0) *Sept 2020 – June 2024*

Darul Uloom Higher Secondary School Kerala

Higher Secondary Education (Percentage: 88.2/100) *July 2018 – May 2020*
